n8n unit - configure webhook URL

13 Jun 2022

By default the n8n unit will host webhook URL's from "localhost:<defined port>"

Altering the webhook domain

```
cd /var/glitch-units/unit_name/glitch/conf  
vi enviroment
```

Add the following (using your domain name)

```
SUBDOMAIN=example  
WEBHOOK_URL=http://example.essingtonits.co.uk/
```

You must restart the unit for the changes to take effect

```
gl -d unit_name  
gl -s unit_name
```
